

Hospital Admission - Urinalysis

Patients Name _____ Date _____

Is your cat urinating outside of its litter box? _____

Is your cat straining to urinate? _____

Is your cat urinating frequently? _____

Have you noticed blood or a strong odor in your cat's urine? _____

What type (wet or dry?) and brand of food is your cat eating? _____

Any other symptoms? _____

If this is a follow-up visit:

Has your cat finished all medications we may have sent home? _____

Any problems administering meds? _____ Which one? _____

Is your cat eating the medicated foods? _____

Which one does he/she enjoy the most? _____

We will set your kitty up in the hospital with urine collection litter. If he/she has not urinated by early afternoon we can perform a Cystocentesis (\$31.50), whereby we gently extract urine with a needle and syringe. This often allows us to send your kitty home that day. With difficult cats this procedure may require sedation (\$50-65) or an Ultrasound guided Cystocentesis (\$126) as well.

Do you approve of the Cystocentesis being performed on your cat if he/she is a candidate? Yes _____ No _____

In the event that you prefer that we do not perform the Cystocentesis or your cat's bladder is not full enough for the procedure, your kitty may stay in the hospital overnight (\$49.00) and give us a sample tomorrow morning.

Cats may have sediment, stones, or tumors in their bladders, causing them pain. If we suspect these, we perform an Ultrasound study on their bladders (\$96) to visualize their bladder wall and its contents.
